

**THE WORTH OF SKILLS.  
STRUCTURAL INNOVATION, KNOWLEDGE REORGANIZATION AND JOBS SHIFTS  
IN THE DIFFERENT STAGES OF GLOBALIZATION**

by  
Gilberto Antonelli, Filippo Civilini, Giovanni Guidetti and Giovanni Pegoretti

TABLE OF CONTENTS

**Introduction and summary**

**PART I. INNOVATION, DEMOGRAPHY, ENVIRONMENT AND GLOBALIZATION:  
KEY CHALLENGES FOR HUMAN SOCIETIES IN THE XXI CENTURY**

**I.1. How innovation and globalization waves shape the evolution of the world economy**

- I.1.1. Key developments in the recent decades
- I.1.2. Technological and geo-political roots of globalization processes
- I.1.3. The uneven distribution of gains and losses

**I.2. Structural adjustment in a macro and meso-economic perspective**

- I.2.1. Firms and productive sectors facing new landscapes of challenges and opportunities
  - I.2.1.1. Technological changes
  - I.2.1.2. Economic changes
  - I.2.1.3. Institutional changes
  - I.2.1.4. Environmental changes
- I.2.2. Family and society
  - I.2.2.1. Technological changes
  - I.2.2.2. Employment polarisation
  - I.2.2.3. Demographical changes
  - I.2.2.4. Social groups
- I.2.3. Labour markets
  - I.2.3.1. Demand for labour
  - I.2.3.2. Supply of labour

**I.3. New business and labour organization models in entrepreneurial perspectives**

- I.3.1. Innovation through new business models
  - I.3.1.1. Firms digital needs
  - I.3.1.2. Social technologies
- I.3.2. How technology is changing people identity and interpersonal relationship
  - I.3.3.1. Reorganizing the labour force of the future
  - I.3.3.2. Developing the digital competences of new workers
  - I.3.3.3. Encouraging the use of technology
- I.3.3. New requirements for the digital labour force

- I.3.2.1. Digital fluency and gamification
- I.3.2.2. Digital skills

## **PART II. MAIN DRIFTS AND STRIFE ON HIGH SKILLS**

### **II.1. Trends and diversity in the demand for high skill labour**

- II.1.1. Graduate jobs: definition and determinants
- II.1.2. Variety in educational and industrial models: the dual German model
- II.1.3. Polarization in Europe: a fragmented framework
- II.1.4. Future demand of high skill labour: an uncertain framework

### **II.2. Surge in the supply of high skill labour**

- II.2.1. Different pace of growth in European countries
- II.2.2. Graduates prospects in Italy and Europe
- II.2.3. Secondary high school graduates prospects in Italy
  - II.2.3.1. Augmented blue collars and digital worker
  - II.2.3.2. New good jobs in the shift from industrial sector to service sector

### **II.3. Trends and diversity in high skill underemployment**

- II.3.1. Graduate underemployment: definition and determinants
- II.3.2. Relative demand as a determinant of graduate underemployment
- II.3.3. Variety and critical aspects of underemployment in Europe
- II.3.4. Five different ways of linking university degrees with job careers

### **II.4. Trend and dispersion in wage differentials**

- II.4.1. Economic value of university degree: evidence from the global North and South
- II.4.2. Economic value of university degree: evidence from Italy
- II.4.3. Different causes of wage dispersion
- II.4.4. Relative advantage of graduated workers
- II.4.5. Underemployment and dispersion of wage differentials
  - II.4.5.1. Real earnings of graduates: a fragmented framework
  - II.4.5.2. Earnings differentials between underemployed and well-matched graduates
- II.4.6. Demand for high-skilled workers and service sector expansion
- II.4.7. Critical issues in Italy and Europe

### **II.5. New interactions among skills and technologies in labour markets**

- II.5.1. Jobs restructuring and transformation of skills requirements
- II.5.2. Work force re-skilling in the firm's perspective
- II.5.3. How to deliver the new digital skills: general vs vocational education
- II.5.4. Technology-driven location of the workplace
- II.5.5. Technology-driven allocation of jobs

## II.5.6. Data science and big data as catalysts in labour markets

### **II.6. Future scenarios**

#### II.6.1. Contrasting perspectives

##### II.6.1.1. Techno-pessimism

##### II.6.1.2. Techno-optimism

#### II.6.2. Forecasting the impact of technology

##### II.6.2.1. Job disruption

##### II.6.2.2. Increase of inequality

##### II.6.2.3. Technological unemployment

##### II.6.2.4. New jobs creation

#### II.6.3. Impact of new business cultures

##### II.6.3.1 Firm and industry 4.0: redefinition of labour and workers

##### II.6.3.2. Green jobs and environmental mission

##### II.6.3.3. Participation and the psychological dimension

#### II.6.4. New boundaries and reallocations between demand and supply of jobs

### **Conclusion**
